SUMMARY

Computer Science Graduate Student with a 3.71 GPA and experience as a Software Test Engineer and Website Developer. Specialized in Full-Stack Engineering, Cybersecurity, and AWS DevOps. Proficient in Python, JavaScript, and React.js, with expertise in Cloud Infrastructure, Facial Authentication systems, and Data Analytics.

PROFESSIONAL EXPERIENCE

Web Developer – WebxInfinity | India

Aug 2023 – Jan 2024

Skills – HTML5, CSS3, JavaScript, PHP, React.js, Python, RESTful APIs, AWS, SEO Optimization, and UI/UX Design.

- Developed high-traffic responsive websites using PHP and JavaScript, customizing specialized themes and integrating complex APIs to automate business workflows.
- Boosted page performance by 30% through strategic SEO and caching optimization while ensuring 100% mobile responsiveness and cross-browser compatibility.

Process Mining Virtual Internship – Celenois | India

Mar 2022 – May 2022

Skills – Process Mining, Celonis, Data Science, Workflow Optimization, Data Mining, and Process Analytics.

- Leveraged Celonis process mining tools to analyze system log data, applying data science techniques to discover, validate, and improve organizational workflows.
- Identified process bottlenecks and performance gaps by combining data mining with process analytics to provide actionable insights for workflow optimization.

Software Test Engineer – Axis Bank | India

Aug 2021 – July 2023

Skills – Python, TypeScript, JavaScript, R, AWS, Azure, Kubernetes, Docker, CI/CD, Playwright, React.js, Cybersecurity, and Data Analytics.

- Engineered automated testing frameworks using Playwright and TypeScript to streamline quality assurance for core banking and rental portal deployments.
- Orchestrated Kubernetes and Docker configurations to deploy AI-driven testing tools within client environments, enhancing CI/CD pipeline efficiency.

PROJECTS

Web Based Facial Authentication (Liveness Detection) | Python, React.js, Bootstrap

- Developed a biometric authentication system using a Chrome Extension to facilitate secure, passwordless logins for web applications.
- Implemented advanced liveness detection techniques and liveness-checking algorithms to ensure high-order security against spoofing attacks.

WRealtime Chat App | React.js, Firebase, HTML

- Engineered a real-time messaging application utilizing Firebase SDK for secure user authentication and Cloud Firestore for scalable data storage.
- Built a responsive interface with React.js and Bootstrap, enabling seamless cross-platform communication and live data synchronization.

Covid-19 Tracker | JavaScript, HTML, CSS, API

- Built a global tracking dashboard utilizing live API datasets and Google Maps integration to visualize real-time infection, recovery, and mortality rates.
- Developed dynamic data visualization features to provide daily and weekly statistical updates on pandemic trends worldwide.

TECHNICAL SKILLS

Programming: Python, R, JavaScript, Nodejs, Typescript, React, HTML, CSS

Database: MongoDB, MySQL

Libraries/Framework/Tools: C++ STL, Python Libraries, ReactJs

Cloud Technologies: Amazon Web Services (AWS)

EDUCATION

Masters in Computer Science - Lewis University | 3.71/4.0 Aug '24 - May '26

Relevant Coursework: Cloud Computing Architecture (AWS), Cybersecurity & Cryptography, Full-Stack Engineering, Generative AI & Large Language Models, Data Visualization, and Software DevOps.
